

Order Gathering System

make informed purchasing decisions

Are you looking to...

Streamline the flow of order information to headquarters?

Help store managers with their product purchasing decisions?

Increase store manager moral?

Decrease overstocked inventory?

The **Greenridge Order Gathering System** allows the store manager to make **informed purchasing decisions** at the time of order placement. The manager to **can review past purchases** as well as **sales histories** of each line item prior to establishing the desired unit size for ordering. Not only will our system help store managers **optimize inventory levels** but it will also **help avoid costly mistakes**.

The system can handle regular, advance, and auto replenishment orders online across the Internet in real-time and offline with synchronization to headquarters. This allows for **both high and low-bandwidth** users to take full advantage of our **Order Gathering System**.

When the **Order Gathering System** is in online mode, the user will have direct access to **quantity-on-hand information**. Offline mode can be used to review information and **place orders in 'near' real time**.
